

# Antinutritional, toxic and other bioactive compounds

Compounds in food

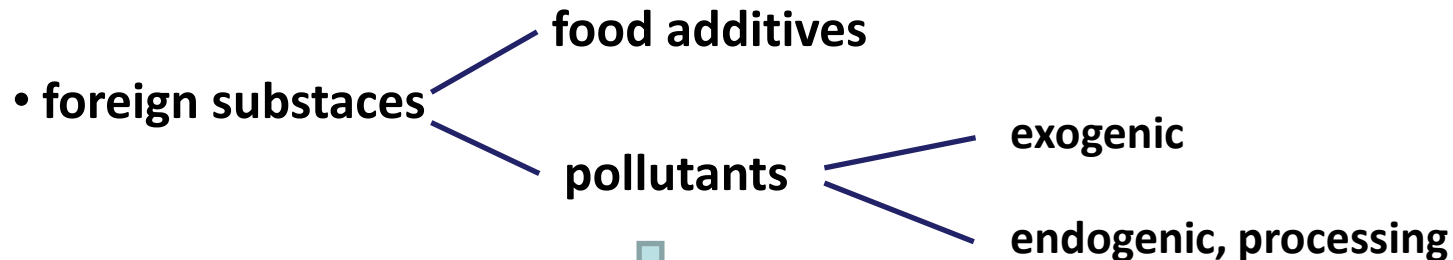

beneficial

indifferent

antinutritive

toxic

- natural antinutritive and toxic compounds

special case

microbial toxines (bacterial toxin and mycotoxins)

## antinutritive compounds

## interference with nutrients

### toxic compounds

- ◆ natural toxic compounds
- ◆ products of anthropogenic activity

toxins

xenobiotics

### toxic effects

- ◆ acute
- ◆ late (chronic)

### the risk level

- ◆ contaminants
- ◆ toxins
- ◆ additive
- ◆ antinutritional substances

### legislation

feeding experiments → **NOAEL** (No Observed Adverse Effect Level) → **ADI** (Acceptable Daily Intake) =  $\text{NOAEL}/100$  (mg/kg), safety factor (100 or more)

## **anti-nutritive substances**

plant origin, potential risk

- ◆ enzyme inhibitors,  
anti-enzymes
- ◆ substances interfering with metabolism of vitamins,  
anti-vitamins, antagonists of vitamins
- ◆ substances interfering with metabolism  
of metals
- ◆ phenol compounds (tannins) reaction with proteins
- ◆ galactooligosaccharides ( $\alpha$ -galactosides) causing flatulence

## anti-enzymes

inhibitors of proteases (anti-proteases),

inhibitors of serine proteases (**trypsin, chymotrypsin, elastase**)

weight loss of domestic animals, inactivation by heat (proteins)

## anti-vitamins

- ◆ structure analogues (oxythiamine, linatin)
- ◆ enzymes (ascorbase, thiaminase, lipoxygenase)
- ◆ formation of non-utilisable complexes (avidin)

## mineral binding compounds

- ◆ phytic acid and phytine Fe, Zn
- ◆ oxalic acid Ca
- ◆ glucosinolates and their degradation products I

## tannins

slow growth of domestic animals

decrease of protein digestibility and of minerals absorption

## $\alpha$ -galactosides

raffinose, higher homologues, gastrointestinal problems

## **toxic compounds**

plant and animal origin, **real risk**

- ◆ developing food intolerance

**toxic to certain individuals**

- ◆ developing intoxication

**toxic to all individuals**

## **food developing food intolerance**

0,3-7% population

**allergy** (immunological reaction), allergenes (immunogenes),  
non developing formation of IgE

### **celiac disease**

non gluten diet (<100 mg/kg dry matter gliadin)

**intolerance** (non-immunological manifestation),  
malfunction of metabolisms, hypersensitiveness (anaphylaxis),  
averse effects (idiosyncrasy)

**lactose intolerance**

foods with low content (<10 g/kg)

lactose free (100 mg/kg)

**phenylketonuria,**

protein hydrolysates without Phe

**favism**

fava beans (*Vicia faba*)

divicine, R = NH<sub>2</sub>

isouramil, R = OH

vicine, R = NH<sub>2</sub>

convicine, R = OH

# **toxins and other compounds developing intoxication**

## **classification**

- ◆ **according to structure**
- ◆ **according to origin**
- ◆ **according to toxic effects**

## **main groups of toxins**

### **alkaloidy**

- ◆ **alkaloids**
- ◆ **saponins**
- ◆ **cyanogens**
- ◆ **glucosinolates**
- ◆ **lectins**
- ◆ **estrogenic substances**
- ◆ **phototoxic substances**
- ◆ **toxic amino acids and their products (biogenic amines)**
- + others**

## **anti-nutritive** and **toxic** compounds of legumes

- ◆ **inhibitors of proteases and amylases**
- ◆  **$\alpha$ -galactosides**
- ◆ **substances developing favism**
- ◆ **lectins**
- ◆ **cyanogenic glycosides**
- ◆ **estrogens**
- ◆ **saponins**
- ◆ **lathyrogens**

## **toxic** compounds of mushrooms

- ◆ **proteins**
- ◆ **peptides**
- ◆ **amino acids**
- ◆ **amines**
- ◆ **hydrazines**
- ◆ **alkaloids**
- ◆ **terpenoids**

# alkaloids

## classification

### ◆ true alkaloids

(N-heterocycles, derived from amino acids)

pyridine (nicotinic)

tobacco a.

piperidine

pepper a.

pyrrolizidine

senecioic (necins) a.

quinolizidine

lupine a.

quinoline

quinine (bark of cinchona tree) a.

### ◆ pseudoalkaloids

(N-heterocyclic, derived from others precursors)

purine

coffee, tea, cocoa a.

terpenoid (glycoalkaloids)

potato, tomato a.

### ◆ Protoalkaloids

(non N-heterocycles, derived from amino acids)

capsaicinoids

bell pepper and chilli pepper a.

| <b>Structural types of basic skeleton</b> | <b>Occurrence</b>           | <b>Precursors</b>               | <b>Example</b>                                     |
|---|-----------------------------|---------------------------------|--|
| <b>True alkaloids</b>                     |                             |                                 |  |
| <b>Pyridine</b>                           | <b>Tobacco leaves</b>       | <b>Nicotinic acid, Orn, Lys</b> | <b>Nicotine, nornicotine, anatabine, anabasine</b> |
| <b>Piperidine</b>                         | <b>Black pepper seeds</b>   | <b>Lys</b>                      | <b>Piperine</b>                                    |
| <b>Pyrrolizidine</b>                      | <b>Ragworts, groundsels</b> | <b>Orn, Ile</b>                 | <b>Senecionine</b>                                 |
| <b>Quinolizidine</b>                      | <b>Lupin seeds</b>          | <b>Lys</b>                      | <b>Lupanine, Lupinine, Sparteine</b>               |
| <b>Quinoline</b>                          | <b>Cinchona bark</b>        | <b>Trp</b>                      | <b>Quinine, quinidine</b>                          |
| <b>Pseudoalkaloids</b>                    |                             |                                 |  |
| <b>Purine</b>                             | <b>Coffee, tea, cocoa</b>   | <b>Purines</b>                  | <b>Coffeine, theobromine, theophylline</b>         |
| <b>Steroid (terpenoid)</b>                | <b>Potatoes, tomatoes</b>   | <b>Mevalonic acid</b>           | <b>Solanine, tomatine</b>                          |
| <b>Protoalkaloids</b>                     |                             |                                 |  |
| <b>Capsaicinoides (vanillylamides)</b>    | <b>Chili pepper</b>         | <b>Phe, Leu, Val</b>            | <b>Capsaicine</b>                                  |

## pyridine alkaloids

**nicotine** and minor alkaloids (~ 20 compounds)

**tobacco**

nicotine

nor nicotine

anatabine

anabasine

**obligation to declare their content on tobacco products, warning**

# piperidine alkaloids

**piperine** – pungent strong, sharp smell

homologues, geometric isomers

piperine

piperyline

piperanine

light

chavicine

isochavicine

nearly tasteless

isopiperine

**Black pepper** (*Piper nigrum*)

4.6-9.7% of piperine

**black pepper** (cooked and dried unripe fruit)

**green pepper** (dried unripe fruit)

**white pepper** (ripe fruit seeds)

- once ground, pepper's aromatics can evaporate quickly; most culinary sources recommend grinding whole peppercorns immediately before use for this reason

# pyrrolizidine alkaloids

mono-, di-, macrocyclic esters of plants

hepatotoxic compounds

echinatine

heliotridine

viridifloric acid

*Symphytum officinale*

Viper's Bugloss

*Petasites hybridus*

*Tussilago*

## quinoline alkaloids

cinchona tree

## purine alkaloids

group of similar compounds

coffee, tee, cocoa (chocolate), mate, guarana

caffeine

theobromine

theophylline

~~thein~~

guaranine

## alkaloids content in green coffee beans

| Alkaloid     | Content in dry matter (%) |                         |                        |
|--------------|---------------------------|-------------------------|------------------------|
|              | <i>Coffea arabica</i>     | <i>Coffea canephora</i> | <i>Coffea liberica</i> |
| Coffeine     | 0.53-1.45                 | 2.11-2.72               | 1.28-1.35              |
| Theobromine  | < 0.005                   | < 0.005-0.01            | < 0.005                |
| Theophylline | < 0.005                   | < 0.005-0.01            | 0.01                   |
| Trigonelline | 0.97-1.31                 | 0.57-0.88               | 0.25-0.29              |

The European Commission Directive 2002/67/EC states only that if a beverage intended for consumption contains caffeine in a proportion in excess of 150 mg/l, the product must have on the label message 'High caffeine content'.

## steroid glycoalkaloids

row of relative compounds

potato, tomato, eggplant

heteroglycosides, aglycones, sugars

potato: ~ 95%

|                     |   |            |   |                      |
|---------------------|---|------------|---|----------------------|
| $\alpha$ -solanine  | = | solanidine | + | $\beta$ -solatriose  |
| $\alpha$ -chaconine | = | solanidine | + | $\beta$ -chacotriose |

**solasodine**

**demissidine**

**$\beta$ -solatriose**

**$\beta$ -chacotriose**

**tomato:**

**tomatine = tomatidine +  $\beta$ -lycotetraose**

**legislation: 200 mg/kg, teratogenic**

## distribution and content of glycoalkaloids in potatoes

| <b>part of tuber</b>                           | <b>content mg.kg<sup>-1</sup><br/>(fresh weight)</b> |
|--|--|
| <b>Unpeeled</b>                                | <b>75</b>  |
| <b>Peel (2-3% of tuber weight)</b>             | <b>300-600</b>                                       |
| <b>Peel (10-15% of tuber weight)</b>           | <b>150-300</b>                                       |
| <b>Peel with germ (<math>\phi</math> 3 mm)</b> | <b>300-500</b>                                       |
| <b>Peeled</b>                                  | <b>12-50</b>   |

## tomatine content in tomatoes

| <b>state of ripeness<br/>(days after flowering)</b> | <b>content mg.kg<sup>-1</sup><br/>(fresh weight)</b> |
|---|--|
| <b>Small and green (10)</b>                         | <b>795</b>   |
| <b>Large and green (20)</b>                         | <b>49</b>  |
| <b>Pink (30)</b>                                    | <b>20</b>  |
| <b>Light red (40)</b>                               | <b>1.5</b>   |
| <b>Red ans ripe (50)</b>                            | <b>3.7</b>   |

## capsaicinoids

capsaicin, homologues, bell and chilli peppers (pungent compounds)

influence of technological procedures

capsaicin, (E)-8-methyl-*N*-vanillylnon-6-enamide

## saponins

many similar compounds of plant origin

heteroglycosides, aglycone, sugar

aglycone = **sapogenin (sapogenol)**,

◆ triterpenoic alcohols

sterols (4-demethylsterols)

## saponins content in legumes and onther plants

| <b>plant</b>       | <b>content %</b> |
|--------------------|------------------|
| <b>soya bean</b>   | <b>0.22-5.6</b>  |
| <b>common bean</b> | <b>0.35-1.6</b>  |
| <b>peanut</b>      | <b>0.01-1.6</b>  |
| <b>spinach</b>     | <b>4.7</b>       |
| <b>beet</b>        | <b>5.8</b>       |
| <b>liquorice</b>   | <b>2.2-15.0</b>  |

## **biological effects**

**erythrocyte hemolysis, damage of intestinal mucose**

- ◆ **toxic for cold-blooded animals**
- ◆ **bitter taste**
- ◆ **detergents activity, emulsion (o/v)**
- ◆ **fungicide, antioxidant, anti-carcinogenic , anti-cholesterolemic activities**

## **usage**

- ◆ **foaming compounds (cosmetics)**
- ◆ **emulsifiers (cosmetics)**
- ◆ **sweeteners (glycyrrhizin, liquorice: 0,2-5,6% saponins)**

## cyanogenic glucosides

many compounds of similar structure

foods of plant origin

heteroglycosides, aglycone, sugar,

aglycone = 2-hydroxynitril (cyanhydrin)

nitriles of 2-hydroxycarboxylic acids

### substituents

- ◆ aliphatic
- ◆ aromatic

### chirality

acetone, methyl(ethyl) ketone

benzaldehyde

### sugar

- ◆ mostly Glu
- ◆ disaccharides: genciobiose and others

**(R)-prunasin**  
plum seeds

**(S)-sambunigrin**  
elderberry (leaves, unripe fruits)

**(R)-amygdalin**  
plum seeds

## properties

- ◆ decomposition ( $\beta$ -glucosidase)  $\rightarrow$  HCN
- ◆ toxicity (inhibition of cytochromoxidase)  
actual intoxication,  
chronic intoxication (cassava, manioc)

$LD_{50} = 0.5-3.5 \text{ mg/kg}$ , i.e. 35-245 mg (70 kg)

---

| <b>origin</b>              | <b>HCN</b>                                    |
|----------------------------|---|
|                            | <b>(mg.kg<sup>-1</sup> of fresh material)</b> |
| <b><i>cassava</i></b>      |   |
| tuber bark                 | 840-2450                                      |
| whole tubers               | 550 (100-330)                                 |
| <b><i>bamboo</i></b>       |   |
| unripe shoots              | 3000  |
| tops of unripe shoots      | 8000  |
| <b><i>stone fruits</i></b> |   |
| apricot stones             | 3200  |
| sour cherry stones         | 3540  |
| sour cherry flesh          | 10  |
| <b>sweet almonds</b>       | <b>0-100</b>                                  |
| <b>bitter almonds</b>      | <b>2800-410</b>                               |
| <b><i>flax</i></b>         |   |
| seeds                      | 200-380                                       |

---

## glucosinolates

thioglucosides (glucosides of mustard oils),

plum seeds,

foods of plant origin (*Brassica* plants))

heteroglycosides, sugar,

aglycone = thiohydroxamate-O-sulphonate, K<sup>+</sup> ion

## substituents

- ◆ aliphatic
- ◆ aromatic
- ◆ heterocyclic

## sugar

exclusively Glc

| <b>glucosinolate</b> | <b>substituent R</b>                | <b>occurrence</b>   |
|----------------------|-------------------------------------|---------------------|
| sinigrim             | prop-2-en-1-yl (allyl)              | charlock, vegetable |
| progoitrin           | ( <i>R</i> )-2-hydroxybut-3-en-1-yl | rape, vegetable     |
| glucoraphanin        | 4-methylsulfinylbutyl               | radish              |
| sanalbin             | 4-hydroxybenzyl                     | white mustard       |
| glucobrassicin       | 3-indolylmethyl                     | vegetables          |

## properties

- ◆ degradation (myrosinase) → isothiocyanates, nitriles and other products
- ◆ toxicity

isothiocyanates and **goitrin** strumigenic,

nitriles **hepatotoxic**

## plant phenols

## estrogenic compounds

estradiol

### ◆ phytoestrogenes

isoflavones

content in soy beans

food of plant origin

daidzin, R = H

genistin, R = OH

content in soy beans (0.13 - 0.42%)

aglycon daidzein

aglycon genistein

**pterocarpanes  
lignans**

**coumestrol**  
**germinated soy beans**

**secoisolariciresinol**  
**linseeds**

- ◆ **mycoestrogenes**
- ◆ **xenoestrogenes**

**properties**

**simultaneously useful and harmful**

# phototoxic compounds

## ◆ cumarins

foods of plant origin

cumarine

linear **psoralen**

angular **angelicin**

## properties

- ◆ phototoxicity (sensitivity of non pigmented skin, connection with skin cancer, acute dermatitis)
  - ◆ phytoalexins (phytoncides, plant antibiotics, pesticides), blastocolines (inhibit germination of seeds)
  - ◆ antimicrobial effects
  - ◆ anticoagulant effects
  - ◆ vasodilatory effects
  - ◆ spasmolytic effects
- 
- ◆ **phototoxic pigments**  
hypericin (St. John's wort), fagopyrin (buckwheat))

## **lectins**

**fytohematoglutinins**

**foods of plant origin (seeds and other parts of plants)**

**proteins with another centre than catalytic**

- ◆ **merolectins (1 centre, catalytic no)**
- ◆ **hololectins (2 centres, catalytic no)**
- ◆ **chimerolectins (1-2 centres, catalytic yes)**

**soy lectin**

**metaloprotein, 120 kDa,**

**bound N-acetyl-D-galactosamine**

## properties

- ◆ precipitate of erythrocytes, interaction with sugar in glycoproteins and glycolipids membranes (protection mechanism of plants against predators, parasites)
- ◆ toxic intravenously, some orally, some not at all,
- ◆ some probiotics (garlic)

## amino acids

### lathyrogens

foods of plant origin (seeds of vetch)

amino acids (peptides, nitriles)

3-(N-oxalyl)-2,3-diaminopropionic acid

### properties

- ◆ structure appearance with proteinogenic amino acids, metabolic failure
- ◆ deformation of legs (osteolathyrism), above all farm animals
- ◆ injury of blood vessel (angiolathyrism),
- ◆ disorder of neural system (neurolathyrism), human

## biogenic amines

aliphatic, aromatic, heterocyclic bases with biological activity

fermented and microbially adulterated plant and animal foods

### formation

- ◆ from amino acids by microbial carboxylases and transaminases

histamine (His)

cadaverine (Lys)

---

| <b>food</b>        | <b>histamine</b> | <b>cadaverine</b> |
|--------------------|------------------|-------------------|
| <b>meat</b>        |                  |                   |
| <b>pork</b>        | <b>0-45</b>      | <b>0-171</b>      |
| <b>sausages</b>    | <b>tr-550</b>    | <b>tr-787</b>     |
| <b>fish</b>        |                  |                   |
| <b>tuna</b>        | <b>tr-8000</b>   | <b>tr-447</b>     |
| <b>sardine</b>     | <b>4-2350</b>    | <b>18-1050</b>    |
| <b>cheeses</b>     |                  |                   |
| <b>emmental</b>    | <b>tr-2000</b>   | <b>0-460</b>      |
| <b>roquefort</b>   | <b>0-4100</b>    | <b>42-905</b>     |
| <b>other foods</b> |                  |                   |
| <b>sauerkraut</b>  | <b>1-200</b>     | <b>1-311</b>      |
| <b>soya sauce</b>  | <b>0-274</b>     | <b>-</b>          |
| <b>beer</b>        | <b>0-22</b>      | <b>0-40</b>       |
| <b>wine</b>        | <b>0-30</b>      | <b>3-108</b>      |

---

tr = traces

## properties

- ◆ hormones (allergic reaction, anaphylactic shock)
- ◆ psychoactive and vasoactive compounds

| biogenic amine   | original AA                  | biological activity   |
|------------------|------------------------------|---|
| histamine        | His                          | local tissue hormone, reduces blood pressure, effect on gastric juice secretion, participation in anaphylactic shock and allergic reactions |
| cadaverine       | Lys                          | stabilisation of macromolecules (nucleic acids), subcellular structures (ribosomes), stimulation of cell differentiation, vegetable hormone |
| putrescine       | Arg <i>via</i><br>Orn or Cit | stabilisation of macromolecules (nucleic acids), subcellular structures (ribosomes), stimulation of cell differentiation, vegetable hormone |
| agmatine         | Arg                          | stabilisation of macromolecules (nucleic acids), subcellular structures (ribosomes), stimulation of cell differentiation, vegetable hormone |
| phenylethylamine | Phe                          | neuromodulator, neurotransmitter in mammalian central nervous system  |
| tyramine         | Tyr                          | precursor of dopamine, local tissue hormone, increases blood pressure, effect on smooth muscle contraction                                  |
| dopamine         | DOPA                         | mediators of sympathetic nerves   |
| tryptamine       | Trp                          | local tissue animal and plant hormones (catecholamines), effect on blood pressure, intestinal peristalsis, mental functions                 |
